← New Service Activated HostBrr Billing Department <sales@hostbrr.com>

Delete

Thank you for choosing HostBrr as your VPS Provider! We have now activated your service and it just awaits your installation before you can use it.

How Do I Find And Install My Server?

To install your server, visit my.hostbrr.com client area and view your services. Here you can find and manage your VPS. Visit your VPS service page and on the left press manage VPS. From here you can find the link to your control panel. You'll be guided through the installation from here. If you need IPv6 connectivity you can activate it during installation or at any time later. Once installed, you'll be e-mailed the server details.

Important!

Your VPS will initially be provisioned with the NVMe boot drive available. Our staff will manually add your HDD storage within 24 hours. Feel free to [open a ticket](#) to let us know that you are waiting for your HDD storage.

How To Mount Your HDD Storage

When your HDD storage is added you have to mount it before you can use it. Simply issue the following

commands to mount your HDD storage:

1. `mkdir /mnt/hdd`
2. `mount /dev/vdb1 /mnt/hdd`

To make the partition mount automatically at boot, use the following command:

3. `echo "/dev/vdb1 /mnt/hdd ext4 defaults 0 0" >> /etc/fstab`

You can freely change the mountpoint “/mnt/hdd” to anything you prefer.

Need Assistance?

Do not hesitate to contact us at my.hostbrr.com if you experience any issues!

Kind regards,

HostBrr

More than a temporary inbox.

Frequently asked questions

How long is email content kept?

Free keeps each message for 1 hour, Pro keeps each message for 7 days — deleted automatically when time is up.

How long are email accounts retained?

An account remains active when it is accessed at least once every 3 months. Accounts inactive for 3 consecutive months are deleted. Active Pro subscriptions are exempt from this inactivity rule.

Can other people read emails in a mailbox?

Every mailbox has a password, generated the moment the account is created — only someone holding the password can open it. And the mailbox is receive-only: it can receive mail, never send it.

Can a forgotten mailbox password be recovered?

No. The server stores only a derived key, so the password cannot be recovered — this mechanism protects user privacy. Passwords should be stored securely. Pro users can reset a mailbox password from the console.

What does History do?

Mailboxes created by a user are saved in History and can be opened there without entering the password again. Free stores History only on the current device; Pro syncs it to the cloud for access across devices.
